

ENVIRONMENTAL POLICY

Objective:

Australian Foundation Drilling and Shoring P/L is committed to the principles of sound environmental management and the concept of sustainable development. We will undertake all of our operations to maximize environmental, economic and social benefits to the community as a whole.

It is our intent to meet the strict environmental conditions placed on all construction and infrastructure projects. We will develop various strategies that will allow compliance to Government, DECC and Council requirements.

This will be achieved by:

- Ensuring that all employees and contractors are aware of AFDS Environmental Policy and Procedures and of their responsibilities.
- Promoting environmental awareness among our employees and contractors.
- Ensuring our people receive the training necessary to achieve our objectives.
- Acting as a responsible corporate citizen working in co-operation with our Community and Government.
- Incorporating measures for the protection of the environment into drilling operations and construction and infrastructure projects from the earliest planning stage.

We will accomplish our objective by operating our projects in an efficient & environmentally sensitive manner.
